Methodology & Background

System1
Create with Confidence

Measuring Emotion and Creative Effectiveness

Pinterest partnered with System1 to understand emotion and attention's impact on overall campaign effectiveness.

- Measured the emotional response of lower funnel tailored creative with **US Pinterest Users** and the **US General Population**.
- Measured **Creative Attention**, the ability for an ad to attract and sustain broad attention.
- Also, analyzed ads to understand what creative features elicit more emotion and sustain more attention.

System1

Create with Confidence

Approach

67 Pins were isolated from Pinterest's US Third-Party Sales Lift Provider's Meta Analysis to understand the relationship between creativity, emotion, attention and in-market sales outcomes including ROAS and Sales Lift.

Test Your Ad
Powered by System1

Star Rating

Predicts long-term ad effectiveness from how positive respondents feel after viewing a Promoted Pin. The stronger and more positive the emotional response, the more this will influence future purchase decisions, and the higher the Star Rating.

Emotion Intensity

The degree of overall intensity of all emotions (positive and negative) generated by the ad.

Creative Attention

The average time respondents chose to keep watching the ad for, measuring the ad's ability to attract and sustain broad attention.

We measured three key metrics for all 67 Pins, both with a Nationally Representative US audience and with US Pinterest Users. Totalling over 20,000 US respondents.

Methodology

Objective

Understand how the emotional and attention reaction to Promoted Pins drives effectiveness by correlating System1 metrics with Pinterest's Sales Lift meta-analysis.

Do Pinterest Users have a different emotional reaction to advertising comparatively to the General Population?

Do ads on Pinterest that elicit a greater emotional response, and attract and sustain more broad attention, generate a greater sales impact in market?

Phase 1

Understanding the in-market sales effects of Promoted Pins in the US. Industry best practice ad ROI tracking studies.

85 US Third-Party Sales Lift Studies (2021-2022)

- **Sector:** CPG, United States
- **Categories covered:** Food, Beverage, Beauty/Cosmetics, Personal Care/OTC, Baby, Homecare, Pet Food
- **Key Metrics analyzed:** ROAS, % Sales Lift

Phase 2

Analysis includes 35 studies with 1-2 Pins per study (67 Pins total)

- 17 top performing studies (31 Pins)
- 18 bottom performing studies (36 Pins)
- 41 Video, 26 Static Assets (61% vs 39%)
- 40 Human Element (Lifestyle) vs 27 Product Focused (60% vs 40%)
- Partnered with **System1** to measure the emotional response to Pins, which is used to predict ad effects with their Star Rating metric.
- System1 also measured the Creative Attention each Pin can hold.
- Measured with US Pinterest Users and US General Public. The same Pins were used across both audiences.

Phase 3

System1 analyzed each Pin for creative features that draw more broad and narrow attention.

This, combined with a similar meta-analysis of EMEA Brand Lift Studies, allowed us to understand emotion's impact on ad recall and brand lift.

It also allowed us to create an emotion and attention-first view on **creative best practice to help drive effectiveness with Promoted Pins.**

Pinner Analysis

Understanding How
Pinterest Users React
Differently To Advertising

System1

Pinterest Users Had a More Intense Positive Response to Ads

Comparing System1's emotional and attention metrics against the general population, Pinterest users produced statistically significantly higher responses across all metrics.

+12% More **Happiness**

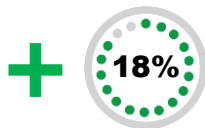

-11% Less **Neutrality**

+27% More **Emotional Intensity**

Pinterest Users paid **attention for longer**. They were also **more emotionally engaged**, which can lead to greater rapid brand recognition.

Pinners Had An Even More Intense and Positive Emotional Response To Video

Comparing System1's emotional and attention metrics against the general population, the Pinterest Users response was even more different for video content.

+14% More
Happiness

-14% Less
Neutrality

This increase in positive emotions **can cause even more longer-lasting effects.** Seen with a **+1.3 life in Star Rating** for video content.

+39% More
Emotional Intensity
+39% Increase in
Fast Fluency

Pinterest Users paid **attention for longer.** They were also **more emotionally engaged,** which can lead to even greater rapid brand recognition.

Ads That Held More
Creative Attention

Create Lasting Brands By Using Creative Features That Sustain Broad Attention

System1 analyzed a sample of ads from the EMEA market for Narrow and Broad Beam creative features to understand how creativity can impact brands, and how to create effective Pins.

Key Broad Beam Creative Features

- Characters
- A Story Unfolding
- People Communicating
- A Sense of Place
- Spontaneous Expressions
- The Living (inc. Animals)

Key Narrow Beam Creative Features

- Words Obtruding
- Flatness
- Abstracted Product Features
- Abstracted Body Parts
- Repetition
- Product Claims

Ads were analyzed for features that **assume the interest of the Pinner** (Narrow Beam) and for features that **attract and sustain broad attention** (Broad Beam).

See more in 'Look out' by Orlando Wood and The Institute of Practitioners in Advertising (2021).

+90%

Higher lift in **Brand Favorability***

Ads with more **Broad Beam features** saw greater increases in brand lift metrics.

System1

*Pinterest internal data, EMEA CPG, Q3 2020-Q1 2022. Brand Lift studies results. System1 analysis on same creatives

Creative Best Practices To Help Increase Effectiveness

Using Broad Beam creative features to elicit more intense positive emotions, and sustain more creative attention were shown to boost Ad Recall, Brand Lift, and ROAS.

Simplicity

Use less words and more visuals to help increase attention and elicit more positive emotions.

Pins that relied heavily on text that obtrudes and obscures creative, getting in the way of visuals, decreased average Star Rating by -0.5 and Creative Attention by -95%.

Humanity

Include humans showing spontaneous changes in facial expressions to help boost positive emotions.

Pins that featured humans showing sudden changes in visible emotion on their face had an average +0.5 Star Rating.

The Living

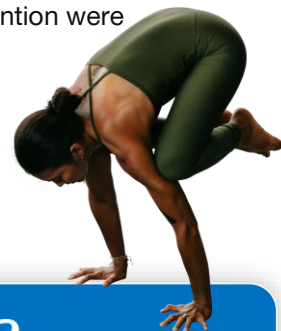

Featuring the living in Pins was shown to increase sales effects.

The largest increase seen in the study. Putting people, animals and babies into creative increased average Star Rating by +1.2.

Creative Best Practices To Help Increase Effectiveness

Using Broad Beam creative features to elicit more intense positive emotions, and sustain more creative attention were shown to boost Ad Recall, Brand Lift, and ROAS.

Views

Ensure there's a clear sense of place in Pins to help increase Creative Attention.

If there was a clear setting, vs a block color or studio background, Pins gained +24% more Creative attention.

Stories

Tell a simple story to help attract and sustain attention.

Having a very simple beginning, middle and end increased Creative Attention by +66%.

Characters

Include characters with vitality to help draw more Pinners in for longer.

Pins with characters full of life saw a +19% increase in Creative Attention.

Stars

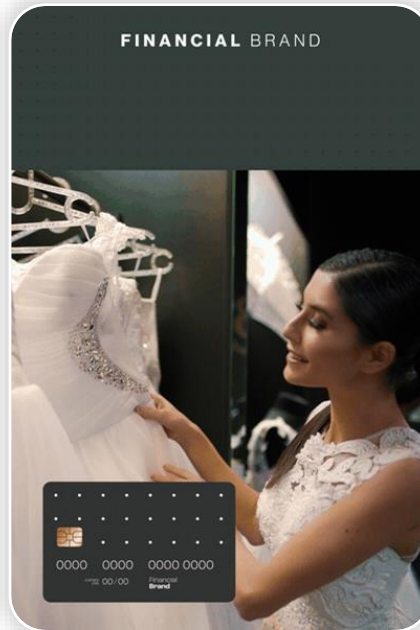

Feature a celebrity in your Pins early on to help keep more Pinners watching.

Pins that included celebrities in their first few seconds gained +23% more Creative Attention.

Creative Best Practice To Help Increase Effectiveness

Using Broad Beam creative features to elicit more intense positive emotions were shown to boost Ad Recall, Brand Lift, and ROAS.
